

Tecnoform S.p.A. Press Folder – CSD 2012

TDL – Tecnoform Design Lab

“**TDL – Tecnoform Design Lab** – is a concept which was launched from Tecnoform’s profound understanding of designing furniture for luxury yachts applied to the sector of recreational vehicles; not only quality fittings but also innovative solutions such as planning drivers which have brought about the realisation of such furnishing.

The **design**, which is characterised by modern, clean lines, presents an innovation for the sector thanks to the introduction of three-dimensional hanging cupboards made using cutting-edge technology and in light materials.

The mix of materials and colours used are typical of the nautical world: the simplicity of oak combines perfectly with the use of leather as a dominating element. The quality fittings are underlined by contrasting stitching and chrome-plated inserts which clearly outline the living spaces. The result obtained is one of the most innovative in the caravan and camper sector.

Careful attention has also been paid to the environment thanks to the use of natural water-varnished wood, eco-leather and recyclable materials which hold FSC certification for internal fittings. FSC certification identifies products containing wood from sustainably and responsibly managed forests following strict environmental, social and economic standards. The forest of origin has been checked and evaluated independently to ensure it conforms to these standards (principles and criteria of compliant forest management), established and approved by the Forest Stewardship Council with the participation and consent of interested parties.

Lastly, **lab** as a synonym of collaboration with the most important companies in the sector, which springs from the use of innovative products and components. An outstanding example is the ultra-flat central illumination giving high quality light, with antiglare effect, or the electrically movable dinette table, and a new junction box for managing functions which introduces the concept of domotics to the caravanning sector and, finally, a heat source which is perfectly integrated into the furniture. All of the accessories have been designed together with the key players in the recreational vehicles sector and will be presented at Caravan Salon 2013 as a “World Premier”
